Puzzle de porte

Pour décorer la porte (ou un mur) de la classe, voici un puzzle géant composé de 15 feuilles A4, d'une dimension totale de 145 cm x 63 cm.

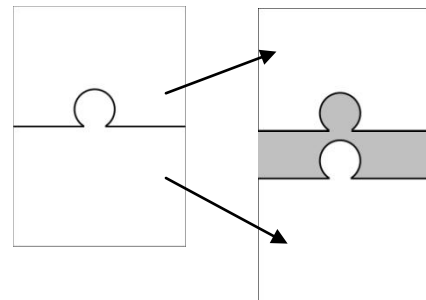

Chaque feuille A4 est composée de 2 morceaux à découper.

Il y a donc 30 pièces de puzzle à assembler.

Le puzzle géant est donc adapté pour une classe de 30 enfants.

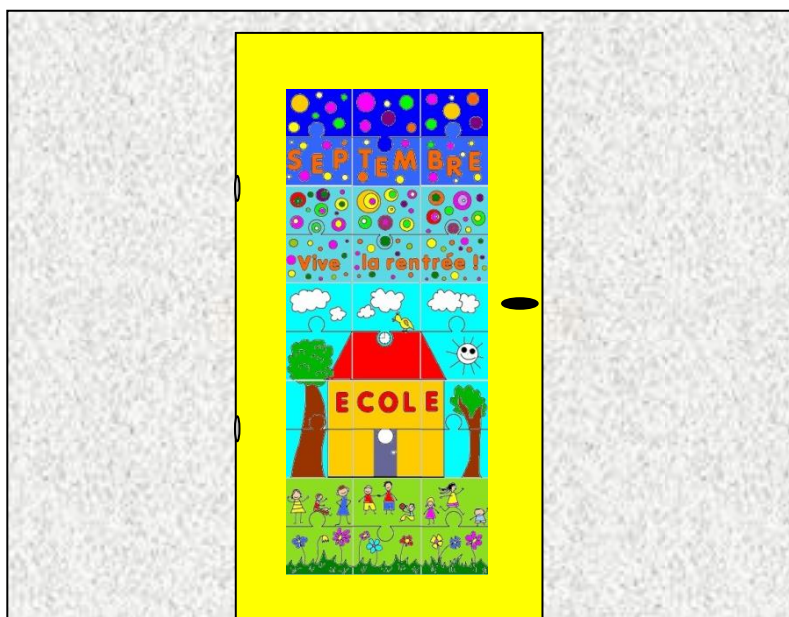

Si l'effectif est inférieur, certains enfants pourront faire deux pièces.

Chaque pièce pourra être coloriée ou peinte par un élève de la classe.

Pour un résultat esthétique, il sera judicieux de se mettre d'accord sur les couleurs des fonds et des dessins qui s'étalent sur plusieurs pièces du puzzle (maison, arbre...)

Pour contourner cette difficulté, on peut aussi assembler toutes les pièces du puzzle (avec du ruban adhésif au dos des feuilles, ou en les collant sur une très grande feuille) et faire colorier collectivement la grande affiche. Dans ce cas, il n'y aura pas de découpage.

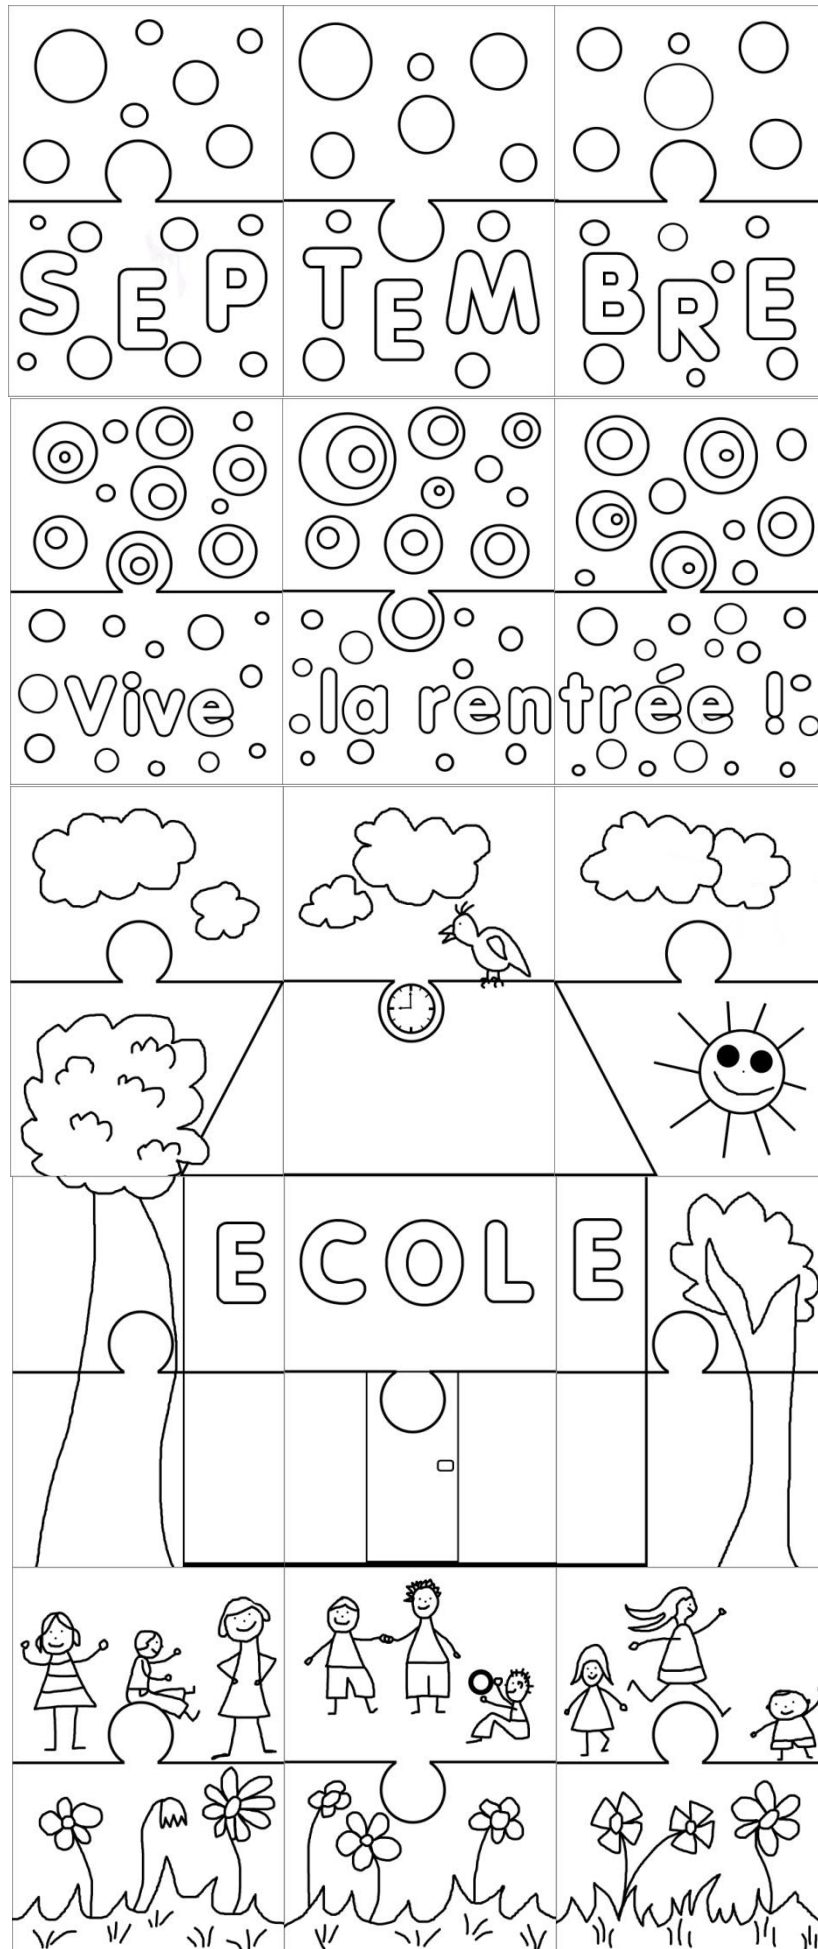

Si on veut une réalisation plus petite, on peut supprimer une ou plusieurs lignes de pièces...
